25th June, 2025
Document version: 1.0.8

Smart INVOICE
Invoice the Smart Way

Table of Contents

1. Document revision.

VSDC Service	What's New	Affected Endpoint
Device Initialization	No changes	
Standard Codes	Added	
Classification Codes	No changes	
Branch Information	No changes	
Notices	No changes	
Item Information	No changes	
Import Information	No changes	
Sales Information	1. Refer to: Commercial, Provisional and Final Invoice information sections 2. Enhanced validations on currency type management. 3. Introduced value credit note	/trnsSales/saveSales /trnsSales/saveSales
Purchase Information	No changes	
Stock Information	No changes	
Commercial invoice information	1. Added new API response codes. 2. Added new endpoint to process commercial invoice information	/trnsSales/saveCommercialInvoice
Provisional and final invoice information	1. Added new API response codes. 2. Added 4 new endpoints to process provisional invoice, Final invoice, Final credit note and final combined invoice information	/trnsSales/saveProvisionalInvoice /trnsSales/saveFinaInvoice /trnsSales/saveFinalCreditNote /trnsSales/saveFinalCombinedInvoice
Other	1. Added monitoring feature for pending uploads on the VSDC home page. 2. Added watermark on scanned sandbox invoices.	

Acronyms

ZRA – Zambia Revenue Authority

VSDC – Virtual Sales Data Controller

API – Application Programming Interface

ERP – Enterprise Resource Planning

CIS – Certified Invoicing Solution

TPIN – Taxpayer Identification Number

REST – Representational State Transfer

JSON – JavaScript Object Notation

HTTP – Hypertext Transfer Protocol

UAT – User Acceptance Testing

WAR – Web Application Archive

JAR – Java Archive

ASYCUDA - Automated System for Customs Data

2. Introduction

2.1. Overview

Smart Invoice is a software solution implemented by the Zambia Revenue Authority (ZRA) to facilitate and execute electronic invoicing processes and optimize stock management. It serves as a comprehensive tool utilized by all taxpayers and business proprietors to oversee and conduct various invoice transactions, monitor stock levels, track stock movements, and efficiently manage operations across multiple branches or locations. In instances where taxpayers utilize their independent invoicing solutions, ZRA extends support through a Virtual Sales Data Controller (VSDC), that acts as a seamless bridge between Certified invoicing systems and ZRA Smart Invoice. This document is designed to provide developers and third-party integrators with comprehensive information on essential components, including API endpoints, data models, and guidance on seamlessly integrating their invoicing systems with the Smart Invoice through the VSDC API.

2.2. Audience

The target audience of this document comprise individuals utilizing private Enterprise Resource Planning Systems (ERPs) and developers/vendors of these third-party invoicing solutions.

3. Technical Reference

3.1. VSDC Environments

The VSDC API provides functionality in two distinct environments: Test and Production. The Test VSDC API is utilized in a test environment, ensuring no impact on production data during integration testing and development. The test VSDC API allows access to data that is specifically linked to the taxpayer's Taxpayer Identification Number (TPIN) and device registration information captured within Smart Invoice sandbox. By using the Test VSDC API, you can securely validate and test your integration without the possibility of unintended alterations to actual sales, import, purchase, and stock information in the production environment.

After development and testing, and once the integration with the test VSDC has successfully passed User Acceptance Testing (UAT), the CIS is rolled out in the live environment for smooth integration and operational purposes. In the production environment, the production VSDC API manages and processes actual sales, import, purchase, and stock information.

Other technical details to be used for reference are outlined in the table below.

Title	Content
Supported Programming Languages	All
Architectural Style	REST
Communication Protocol	HTTP
Data Exchange Format	JSON
Supported Operating System	Windows Server/10+, Unix, Linux
Supported Webservers	Apache HTTPd server, Apache Tomcat Version: ≥ 9.0 and < 10.0, Eclipse Jetty, Oracle WebLogic
VSDC Java Version	Java 1.8
VSDC Distributed Package	WAR/JAR
VSDC API Base URL (Production/Test)	http://<hostname>: <server.port>/<vsdcpath> e.g. https://localhost:8080/zrasandboxvsdc
VSDC Postman Collection	https://www.postman.com/warped-astronaut-6832/virtual-sales-data-controller-api/overview

3.2. Authentication

The VSDC API utilizes API keys as a security mechanism to authenticate all requests originating from third-party systems to Smart Invoice. These unique API keys are retrieved by the VSDC during the device initialization process and stored securely on the server where the VSDC is hosted. Every subsequent API request sent via the VSDC will inherently contain these keys, removing the necessity for developers to acquire or add them manually to any request.

3.3. Data Types

The VSDC API operates with data types that align with JSON formatting standards. It is essential to adhere strictly to the prescribed data formats and structures for requests and responses as outlined in their respective sections when interacting with each endpoint.

3.4. Request and Response Bodies

The VSDC API utilizes JSON data format for communication. When sending requests, ensure the data is structured as JSON objects. Similarly, all responses from the API will be encoded in JSON format for consistent handling and interpretation.

3.5. Process Flow

Some VSDC API endpoints depend on prior operations being finished before they can carry out the desired transaction or process effectively. In these interconnected endpoints, the documentation will clearly indicate the prerequisite operations within the corresponding endpoint section.

Response Codes

The VSDC API utilizes standard HTTP response codes to communicate API request success or failure. In addition, custom response codes have been added to the JSON response body to indicate the specifics of the API request. Refer to Section 5 the API response codes section for further details.

4. Getting Started

4.1. Signup and Registration

To access the VSDC API, users are required to register on the Smart Invoice Taxpayer Portal initially. Subsequently, they must apply for a VSDC service, undergo technical and administrative verification, and await approval. Once approved by the Zambia Revenue Authority (ZRA), users receive the VSDC as a WAR/JAR file, accessible for download from the Portal under 'Device Management.' They can then deploy and configure it on their local server for use. The diagram below illustrates this process visually.

Sign Up for Smart Invoice	Request VSDC Service	Approval by ZRA	Download and deploy VSDC

Note: Signup and registration take place in both the test and production environments. The access to each environment depends on the taxpayer's current stage of integration.

4.2. VSDC Setup and Initialization

Once you've installed the VSDC API on your local server, follow the specified steps during device initialization to activate it for data transmission and reception. Upon completing this initialization, you can start sending and receiving transaction data with Smart Invoice. The diagram below visually illustrates this communication process.
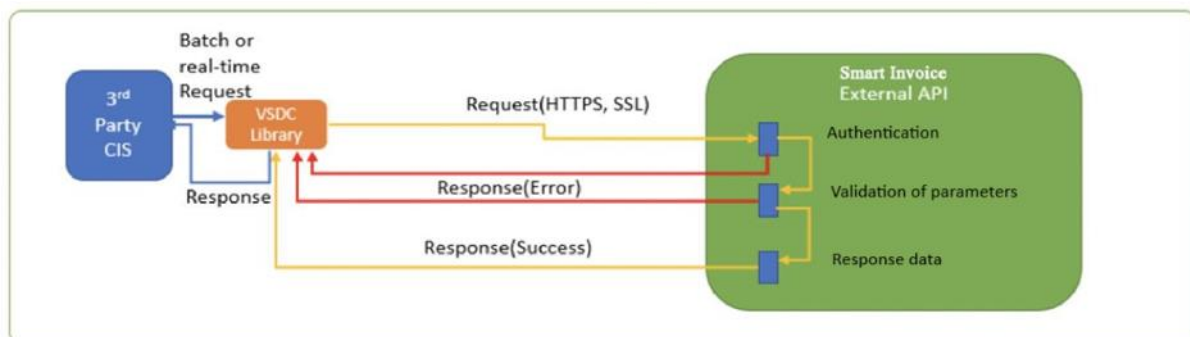

4.3. VSDC Services

The VSDC services are categorized into eight (8) groups according to their specific purposes. Below is a concise overview introducing the purpose of each category.

1. Device initialization
    a. The initialization process is used to verify the device's identity, retrieve security keys, save configuration settings, and prepare the device for interaction with Smart Invoice.
    b. The methods in this category are only invoked during the initial setup of the VSDC.
2. Code Data
    a. The methods in this category are used to fetch standard codes from Smart Invoice such as item classification codes, tax category codes, package type, units of measurement, and weight codes.
3. Branch Information
    a. The methods in this category are used to transmit specific branch information, including details about customers and staff and to fetch information about all registered branches by a taxpayer.
4. Item Information
    a. The methods in this category are used to transmit details of products or services that are registered in a taxpayer's CIS.
5. Import Information
    a. The methods in this category facilitate the exchange of all data associated with imported items by a taxpayer, which have been declared in the ZRA customs system ASYCUDA. Using these endpoints, a taxpayer can fetch imported items and register acknowledgement of importation of these items of Smart Invoice.
6. Sales Information
    a. The methods in this category are used to transmit sales data from a taxpayer's CIS to Smart Invoice.
7. Purchase Information
    a. The methods in this category are used to fetch purchases made by a taxpayer from another Smart invoice user from Smart Invoice, and to transmit purchase information from a non-Smart Invoice user, from a CIS to Smart Invoice. This information encompasses precise particulars related to each purchase, including supplier details, invoice number, item specifics, and the transaction's date and time.
8. Stock Information
    a. The methods in this category are used to transmit information related to the taxpayer's inventory, including details about stock status, movements, and adjustments.

4.4. VSDC API Versions

The API version is determined by the release date of a new version. Taxpayers will receive notifications regarding the latest additions and modifications to the API version through the publication of the new specifications document on the ZRA website.

4.5. Interacting with the VSDC API

This section demonstrates how to make an API request to the VSDC:

1. VSDC Setup
   a. Install the VSDC WAR file, acquired after completing the registration process, onto your server and run the application.
   b. When deployed, run the URL in your browser. You should have a landing page like below.
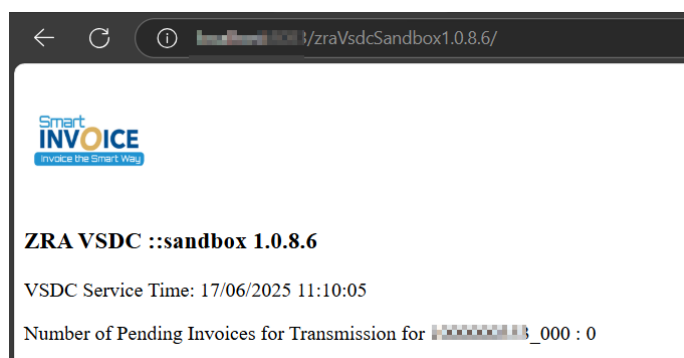

2. Initiate a request.
   a. Select an endpoint and specify the HTTP method to indicate the desired operation. For example, the *'device initialization'* endpoint uses the HTTP method **POST** and the path *'initializer/selectInitInfo'*.
   b. Ensure to identify any necessary parameters that should be included in the request header, request body, or as part of the path.
   c. Upon invocation of the selected endpoint, the API will provide response status codes, response headers, and a response body.

5. VSDC API Services

5.1. Device Initialization

The Device Initialization API streamlines the secure establishment of a connection between the VSDC and ZRA's Smart Invoice backend. It retrieves security keys from Smart Invoice, which will be used to verify the identity of the communicating device and limit API access to authorized devices. Additionally, it facilitates the loading of essential configuration settings necessary for seamless integration operations onto the server hosting the VSDC.

- **Endpoint**: /initializer/selectInitInfo
- **Request method**: POST.
- **Requirement**: MANDATORY
- **Description**: Initializes the device for interaction between CIS and Smart Invoice. Initial endpoint, only called once for any new device registration on smart invoice. Retrieves APIs keys used to authenticate and verify user.
- **Request Parameters**: TPIN, Branch Id, Device Serial No (All provided by ZRA)
- **Response**: Returns confirmation of successful device initialization along with generated security keys and loaded configuration settings.
- **Note**: This endpoint is only required to be called once. Details returned in the response MUST be stored locally for future reference. A response of "Device already installed indicates that the request data was already utilized to call this endpoint."

ERP   VSDC API

Integration ──POST /initializer/selectInitInfo──▶ Device Initialized, API keys are generated and stored.

5.2. Standard Codes (Constants)

The Standard Codes API facilitates access to predefined values utilized in API requests to represent specific attributes concisely. These constant codes convey essential information such as units of measurement, packaging units, sale types, product types etc.

- **Endpoint**: /code/selectCodes
- **Request method:** POST.
- **Requirement**: MANDATORY
- **Description**: Retrieves a comprehensive list of standard codes along with their descriptions to be stored and used for all transaction requests in taxpayer's third-party system.
- **Request Parameters**: TPIN, Branch Id, Last Request Date.
- **Response**: Returns a list of standard codes along with detailed descriptions to be stored in third-party system.
- **Note**: Details returned in the response MUST be stored locally for future reference.

5.3. Classification Codes

Smart Invoice utilizes the United Nations Standard Products and Services Code (UNSPSC) as the standardized classification system for products and services. The Classification Codes API allows third-party systems to integrate the UNSPSC, enabling accurate categorization of products/items.

This API provides developers with access to the updates of the UNSPSC code list stored on Smart Invoice. A complete list of these codes is readily available for access by the developers of smart invoice solutions, for classification of their products. It can be accessed on the ZRA website under the Smart Invoice tab. All classifications of products must be done at commodity level. Where a commodity level does not apply, the closest must be utilized in classifying products or services.

- **Endpoint**: /itemClass/selectItemsClass
- **Request method**: POST.
- **Requirement**: MANDATORY
- **Description**: Retrieves and stores updates to classification codes used for item management. Due to the substantial size of classification codes, the API implements pagination. Developers can retrieve codes in batches of 1000, optimizing performance and minimizing data transfer overhead.
- **Request Parameters**: TPIN, Branch Id, Last Request Date

- **Response**: Returns the requested classification codes in the JSON-encoded format, ready to be stored and utilized within the third-party system.
- **Note**: Details returned in the response MUST be stored/updated locally.

5.4. Notices

The Notices API serves as a means for ZRA to communicate important announcements and upcoming events/updates to users of Smart Invoice. This API specification enables the retrieval of all notices published by ZRA.

- **Endpoint**: /notices/selectNotices
- **Request method**: POST.
- **Requirement**: OPTIONAL
- **Description**: Retrieves details of all notices published by ZRA on Smart Invoice.
- **Request Parameter**: TPIN, Branch Id, Last Request Date
- **Response**: Returns a list of notices published by ZRA.

Notices Request

Object ID	Object Name	Attribute ID	Attribute Description	Attribute Name	Data Type	Required	Data Length

5.5. Branch Information

The Branch API facilitates the seamless integration of branch information from third-party systems into Smart Invoice. This API allows businesses to efficiently manage and retrieve data pertaining to branches and branch users within Smart Invoice that has been shared by the third-party system.

SAVE BRANCH USER

- **Endpoint:** /branches/saveBrancheUser
- **Request method:** POST.
- **Requirement:** OPTIONAL
- **Description:** Saves branch user accounts created in the third-party system to Smart Invoice.
- **Request Parameters:** Branch user data including name, contact information, address, etc.
- **Response:** Returns confirmation of successful creation of branch user on Smart Invoice.

Save Branch User Request

Object ID	Object Name	Attribute ID	Attribute Description	Attribute Name	Data Type	Required	Data Length
BhfUserSaveReq	Save Branch User Request	tpin	Taxpayer's identification number as registered on core Tax Administration System TaxOnline	TPIN	VARCHAR	Y	10
		bhfId	Taxpayer branch (store) location identifier	Branch ID	VARCHAR	Y	3
		userId	This is the unique identifier assigned to the users of the system	User ID	VARCHAR	Y	20
		userNm	This is the username assigned to the user of the system	Username	VARCHAR	Y	60
		adrs	This is the user's address	Address	VARCHAR	N	200
		useYn	This is the user active status on the system	Used / UnUsed	VARCHAR	Y	1
		regrNm	This is the username of the creator of branch user	Registrant Name	VARCHAR	Y	60
		regrId	This is the user id of the creator of the branch user	Registrant ID	VARCHAR	Y	20
		modrNm	This is the username of the modifier of the details of the branch user	Modifier Name	VARCHAR	Y	60
		modrId	This is the user id of the modifier of the details of the branch user	Modifier ID	VARCHAR	Y	20

5.6. Customer Information

The Customer API acts as a connection point linking your third-party system with Smart Invoice, allowing smooth transfer and handling of customer data. This API specification allows for the creation, retrieval, and editing of customer details in Smart Invoice based on data provided by the third-party system.

GET CUSTOMERS
- **Endpoint:** /customers/selectCustomer
- **Request method:** POST.
- **Requirement:** OPTIONAL
- **Description:** Retrieves customer details based on the provided customer TPIN.
- **Request Parameters:** TPIN, Branch Id, Customer TPIN

- **Response**: Returns customer details saved on Smart Invoice including name, contact information, address, etc.

Get Customer Request

Object ID	Object Name	Attribute ID	Attribute Description	Attribute Name	Data Type	Required	Data Length

SAVE BRANCH CUSTOMER

- **Endpoint:** /branches/saveBrancheCustomers
- **Request method:** POST.
- **Requirement:** OPTIONAL
- **Description:** Saves customer details captured in third-party system to Smart Invoice.
- **Request Parameters:** Customer data including name, contact information, address, etc.
- **Response:** Returns confirmation of successful creation of customer.

5.7. Item Information

The Item API enables the seamless integration of product or service information from third-party systems into Smart Invoice. An item refers to any product or service offered or sold by a business. Developers can utilize the Item API endpoints to transmit details about each item, such as product names, descriptions, pricing information, units of measure, and classification codes. This integration ensures that Smart Invoice maintains an up-to-date and synchronized record of all items a business has available for sale, aligning with the data in the third-party system.

SAVE ITEM
- **Endpoints:** /items/saveItem
- **Request method:** POST.
- **Requirement:** MANDATORY
- **Description:** Saves product or services created in third-party system to Smart Invoice.
- **Request Parameter:** Item data including name, description, price quantity, category, etc.
- **Response:** Returns success for the saved product of service.
- **Dependency:** This endpoint requires valid standard and classification codes. To ensure successful use, retrieve and store/update these codes before calling the endpoint with its attributes.
- **Note:** This endpoint allows you to register the products/services your offer with ZRA. It is used solely for the purpose of recording these items. Stock-in and stock adjustments will be invoked by other process such as purchase, import or sales. All items registered must align with level 4 of the UNSPSC codes list. Where not found, businesses must align to the closest codes at that level.

ERP   VSDC API

Save Item Request

Object ID	Object Name	Attribute ID	Attribute Description	Attribute Name	Data Type	Required	Data Length	Format
ItemSaveReq	Save Item Request	tpin	Taxpayer's identification number as registered on core Tax Administration System TaxOnline	TPIN	VARCHAR	Y	10

UPDATE ITEMS

- **Endpoint:** /items/updateItem
- **Request method:** POST.
- **Requirement:** MANDATORY
- **Description:** Updates specific product item details.
- **Request Parameter:** Item data including name, description, price, category, etc.
- **Response:** Returns success for updated item details.
- **Dependency Note:** This endpoint requires valid standard and classification codes. To ensure successful use, retrieve and update these codes before calling the endpoint with its attributes.
- **Note:** Tax categories (VAT category code, IPL category code, TL category code, and excise tax category code) are only required if the item falls under that specific tax category. For instance, the TL category code is always required for accommodation for taxpayers registered under TL, but it is not mandatory for other items that do not pertain to tourism.

ERP	VSDC API

Get Standard Codes —POST /code/selectCodes→ Retrieves Constant Codes from Smart Invoice and stores it in ERP

Get Classification Codes —POST /itemClass/selectItemsClass→ Retrieves Class Codes from Smart Invoice and stores it in ERP

Update Item —POST /items/updateItem→ Item details updated in ERP are synchronized and saved to Smart Invoice

SAVE ITEM COMPOSITION

- **Endpoint:** /items/saveItemComposition
- **Request method:** POST.
- **Requirement:** OPTIONAL
- **Description:** This endpoint is designed to manage the storage of items involved in processing or repackaging activities. It is particularly useful for situations where multiple products are combined or transformed into a unique finished product.
- **Request Parameters:** Item data including item code, quantity, etc.
- **Response:** Returns success or failure of the save item composition operation.

5.8. Import Information

The Imports API facilitates the exchange of all data associated with items imported by a business, as declared in the Automated System for Customs Data (ASYCUDA). This integration ensures seamless transfer of import details, enabling businesses to efficiently manage and synchronize imported item data in their third-party systems.

Through the Imports API, businesses can automatically fetch and integrate import details from ASYCUDA directly into their third-party system. This includes information such as product descriptions, quantities, values, etc.

GET IMPORTS

- **Endpoint:** /imports/selectImportItems
- **Request method:** POST.
- **Requirement:** MANDATORY
- **Description:** Retrieves a list of imported items saved on Smart Invoice from ASYCUDA.
- **Request Parameters:** TPIN, Branch Id, Last Request Date.
- **Response:** Retrieves a list of imported items including detailed information such as product descriptions, quantities, values, etc.

UPDATE IMPORT ITEMS

- **Endpoint:** /imports/updateImportItems
- **Request method:** POST.
- **Requirement:** MANDATORY
- **Description:** This endpoint is used to acknowledge, or disregard imported items received from Smart Invoice which were declared on ASYCUDA. Acknowledged imported items will have to be saved in stock whereas disregarded imported items will not.
- **Request Parameters:** Import data including declaration date, item sequence, item classification code, import item status code, etc. (See table for full parameter list)
- **Response:** Returns the successful confirmation of the updated status of an import item.
- **Dependency:** After your import is approved, call the "Save Stock Items" endpoint to add the approved imports as stock items. Subsequently, call the "Stock Master" endpoint to update the existing stock quantities for any items that were already present in your inventory reflecting the additional approved imports. This process ensures that approved imports are accurately reflected in the overall stock inventory.

5.9. Sales Information

The Sales API facilitates the transmission of detailed sales data from a third-party system to Smart Invoice. This data includes specific details associated with each sale, such as customer information, sale type, invoice number, and the date/time of the transaction. Developers can use this API to seamlessly transfer sales information, ensuring accurate invoicing and efficient management of customer transactions.

SAVE SALES

- **Endpoint:** /trnsSales/saveSales
- **Request method:** POST.
- **Requirement:** MANDATORY
- **Description:** This endpoint facilitates the submission of sales data from the third-party system into Smart Invoice.
- **Request Parameters:** Sales data including customer details, sale type, invoice number, and transaction timestamp.
- **Response:** Returns the success or failure of sales data submission.

- **Dependency:** After completing a sale, it's important to update the inventory to reflect the correct levels of the items sold. This involves using the 'Save Stock Items' endpoint to show stock movements. Following this, the 'Stock Master' endpoint should be called to update the stock quantities based on the sales recorded. This process ensures that inventory adjustments due to sales are accurately reflected in the overall stock inventory, for further reporting to Smart Invoice.
- **Note:** All sales receipts must be printed with the 'rcptNo' which is returned in success response when sale is posted to VSDC. This is the ZRA invoice number which must be referred to when taxpayer intends to issue a credit note or debit note.

		taxRtIpl1	Tax rate for Insurance premium levy – As per standard codes	Tax Rate IPL	NUMBER	Y	7,2	
		taxRtIpl2	Tax rate for Insurance Premium Levy – As per standard codes	Tax Rate IPL2	NUMBER	Y	7,2	
		taxRtTl	Tax rate for Tourism Levy – As per standard codes	Tax Rate TL	NUMBER	Y	7,2	
		taxRtEcm	Tax rate for Excise Coal Mining – As per standard codes	Tax Rate ECM	NUMBER	Y	7,2	
		taxRtExeeg	Tax rate Electricity and Energy generation – As per standard codes	Tax Rate EXEEG	NUMBER	Y	7,2	
		taxRtTot	Tax rate VAT – As per standard codes	Tax Rate TOT	NUMBER	Y	7,2	
		taxAmtA	This is the total tax charged on all VAT category A line items on invoice (Pass 0.0 when not applicable)	Tax Amount A	NUMBER	Y	18,4	
		taxAmtB	This is the total tax charged on all VAT category A line items on invoice (Pass 0.0 when not applicable)	Tax Amount B	NUMBER	Y	18,4	
		taxAmtC1	This is the total tax charged on all VAT category C1 line items on invoice (Pass 0.0 when not applicable)	Tax Amount C1	NUMBER	Y	18,4	
		taxAmtC2	This is the total tax charged on all VAT category C2 line items on invoice (Pass 0.0 when not applicable)	Tax Amount C2	NUMBER	Y	18,4	
		taxAmtC3	This is the total tax charged on all VAT category C3 line	Tax Amount C3	NUMBER	Y	18,4	

			items on invoice (Pass 0.0 when not applicable)				
		taxAmtD	This is the total tax charged on all VAT category D line items on invoice (Pass 0.0 when not applicable)	Tax Amount D	NUMBER	Y	18,4
		taxAmtRvat	This is the total tax charged on all VAT category RVAT line items on invoice (Pass 0.0 when not applicable)	Tax Amount RVAT	NUMBER	Y	18,4
		taxAmtE	This is the total tax charged on all VAT category E line items on invoice (Pass 0.0 when not applicable)	Tax Amount E	NUMBER	Y	18,4
		taxAmtF	This is the total tax charged on all VAT category F (Service Charge) line items on invoice (Pass 0.0 when not applicable)	Tax Amount F	NUMBER	Y	18,4
		taxAmtIpl1	This is the total Insurance Premium Levy IPL on invoice (Pass 0.0 when not applicable)	Tax Amount IPL1	NUMBER	Y	18,4
		taxAmtIpl2	This is the total Insurance Premium Levy IPL2 (Re-Insurance) on invoice (Pass 0.0 when not applicable)	Tax Amount IPL2	NUMBER	Y	18,4
		taxAmtTl	This is the total tax Tourism Levy charged on invoice (Pass 0.0 when not applicable)	Tax Amount TL	NUMBER	Y	18,4
		taxAmtEcm	This is the total tax charged on all Excise Coal Mining line items on invoice (Pass 0.0 when not applicable)	Tax Amount ECM	NUMBER	Y	18,4
		taxAmtExeeg	This is the total tax charged on all Excise Electricity and Energy generating line items on invoice (Pass 0.0 when not applicable)	Tax Amount EXEEG	NUMBER	Y	18,4
		taxAmtTot	This is the total tax charged on all TOT line items on invoice (Pass 0.0 when not applicable)	Tax Amount TOT	NUMBER	Y	18,4
		totTaxblAmt	This is the **total Tax Exclusive Amount** for all line items on invoice	Total TaxlAmt	NUMBER	Y	18,4

		totTaxAmt	This is the total tax charged on all line items on invoice	Tot Tax Amount	NUMBER	Y	18,4	
		totAmt	This is the **total Tax Inclusive Amount** of all line items on the invoice	Total Amount	NUMBER	Y	18,4	
		prchrAcptcYn	This specifies whether a purchase has been accepted or not. (Pass N)	Purchase Accepted Yes or No	VARCHAR	Y	1	
		remark	This is any comment/remark on the transaction	Remark	VARCHAR	N	400	
		regrId	This refers to the ID of the user of the system adding the item	Registrant Id	VARCHAR	Y	20	
		regrNm	This refers to the username of the person making the sale on the system.	Registrant Name	VARCHAR	Y	60	
		modrId	This refers to the ID of the user of the system adding the item	Modifier Id	VARCHAR	Y	20	
		modrNm	This refers to the username of the person modifying the sale on the system. (Default to ADMIN when not applicable)	Modifier Name	VARCHAR	Y	60	
		saleCtyCd	This is the sales category code. (pass 1)	Sales Category Code	VARCHAR	Y	2	
		lpoNumber	This is the Local Purchase order number as presented by the buyer. This will be validated.	LPO Number	VARCHAR	N	50	
		currencyTyCd	This is the currency code used in the transaction – as per standard codes	Currency Type Code	VARCHAR	Y	5	
		exchangeRt	This is the exchange rate used in the transaction.	Exchange rate	NUMBER	Y	18,4	
		destnCountryCd	This is the destination country of the item being exported.	Destination Country Code	VARCHAR	N	5	
		dbtRsnCd	This is the reason code for issuing a debit.	Debit Reason Code	VARCHAR	N	5	
		invcAdjustReason	This is the reason for adjusting an invoice	Invoice Adjustment Reason	VARCHAR	N		
		cashDcRt	Cash/value discount rate	Cash Discount Rate	NUMBER	N	18,4	

		cashDcAmt	Cash /value discount amount	Cash discount amount	NUMBER	N	18,4	
	List<Trns SalesSave WrItem>	itemSeq	Item Sequence Number	Item Sequence Number	NUMBER	Y	11	
		itemCd	This is the item code as defined on your system	Item Code	VARCHAR	Y	100	
		itemClsCd	This is the UNSCP code assigned to the item	Item Classification Code	VARCHAR	Y	10	
		itemNm	This is the item name as defined on your system	Item Name	VARCHAR	Y	200	
		bcd	This is the barcode assigned to the item	Barcode	VARCHAR	N	20	
		pkgUnitCd	This is the packaging unit code assigned to the item as per standard codes.	PackagUnit Code	VARCHAR	Y	5	See '6.4. Packaging Unit'
		pkg	This is the number of package items being sold.	Package	NUMBER	Y	13,2	
		qtyUnitCd	This is the assigned single item unit code assigned to the item as per standard codes	Quantity Unit Code	VARCHAR	Y	5	See '6.5. Unit of Quantity'
		qty	This is the quantity of items being sold	Quantity	NUMBER	Y	13,2	
		prc	This is the tax inclusive price of the item	Unit Price	NUMBER	Y	18,4	
		splyAmt	This is the total amount of the supplied item (qty * prc)	Supply Amount	NUMBER	Y	18,4	
		dcRt	This is the discount rate on line item (Pass 0.0 if not applicable)	Discount rate	NUMBER	Y	5,2	
		dcAmt	This is the discount amount on line item (Pass 0.0 if not applicable)	Discount Amount	NUMBER	Y	18,4	
		isrccCd	Insurance Company Code	Insurance Company Code	VARCHAR	N	10	
		isrccNm	Insurance Company name	Insurance Company name	VARCHAR	N	100	
		isrcAmt	This is the insurance amount on line item	Insurance Amount	NUMBER	N	18,4	
		vatCatCd	This represents the tax category code for VAT purposes on line item	Vat Category Code	VARCHAR	Y	5	

97

		exciseTxCatCd	This represents the tax category code for Excise on line item.	Excise Tax Category Code	VARCHAR	Y	5	
		vatTaxblAmt	This is the **Tax Exclusive Amount** for VAT at line-item level (Pass 0.0 when not applicable)	VAT Taxable Amount	NUMBER	Y	18,4	
		exciseTaxblAmt	This is the **Tax Exclusive Amount** for Excise at line item level (Pass 0.0 when not applicable)	Excise Taxable Amount	NUMBER	Y	18,4	
		tlTaxblAmt	This is the **Tax Exclusive Amount** for Tourism Lecy at line-item level (Pass 0.0 when not applicable)	Tourism Levy Taxable Amount	NUMBER	Y	18,4	
		iplTaxblAmt	This is the **Tax Exclusive Amount** for IPL at line-item level (Pass 0.0 when not applicable)	Insurance Premium Levy Taxable Amount	NUMBER	Y	18,4	
		iplAmt	This is the insurance premium levy tax amount charged on the line item	Insurance Premium Levy Amount	NUMBER	Y	18,4	
		tlAmt	This is the Tourism Levy amount charged on the line item (Pass 0.0 when not applicable)	Tourism Levy mount	NUMBER	Y	18,4	
		vatAmt	This is the VAT amount charged on the line item	VAT Amount	NUMBER	Y	18,4	
		exciseTxAmt	This is the excise tax amount charged on the line item (Pass 0.0 when not applicable)	Excise Tax Amount	NUMBER	Y	18,4	
		totAmt	This is the **total Tax Inclusive Amount** of the line item	Total Amount	NUMBER	Y	18,4

GET PRINCIPAL

- **Endpoint:** /trnsSales/selectPrincipals
- **Request method:** POST.
- **Requirement:** OPTIONAL (RVAT agents only).
- **Description:** This endpoint is designed to get principals for RVAT agents
- **Request Parameters:** principal data including Tpin, bhfId, last request date.
- **Response:** Returns success or failure. On success it returns list of principals.
- **Note:** This endpoint is intended solely for use by RVAT Agents to retrieve principal details for processing RVAT transactions.

Select Principal request

Object ID	Object Name	Attribute ID	Attribute Description	Attribute Name	Data Type	Required	Data Length
selectPrincipals	Search principal Request	tpin	Taxpayer's identification number as registered on core Tax Administration System TaxOnline	TPIN	VARCHAR	Y	10
		bhfId	Taxpayer branch (store) location identifier	Branch ID	VARCHAR	Y	3
		lastReqDt	This is the date depicting the last time an endpoint was called. By default, this defaults to 20160523000000	Last Request Date	VARCHAR	Y	14
JSON REQUEST SAMPLE

SELECT INVOICE

- **Endpoint:** /trnsSales/selectInvoice
- **Request method:** POST.
- **Requirement:** OPTIONAL
- **Description:** This endpoint facilitates the retrieval of invoice transactions already posted to ZRA.
- **Request Parameters:** TPIN, Branch ID, Invoice SDC ID and CIS Invoice number.
- **Response:** Returns details of an already uploaded invoice.
- **Note:** This request will only return details if an invoice was successfully posted to ZRA. More information about the uploaded invoices is available on the Portal under Transaction Management.

5.10. Commercial invoice information

SAVE COMMERCIAL INVOICE

- · **Endpoint:/trnsSales/saveCommercialInvoice**
- · **Request method:** POST

- · **Requirement:** Required for mining sector

- · **Description:** For all export of goods and incidental services (e.g. Transport and Insurance), suppliers will be required to issue a commercial invoice using Smart Invoice. It serves as a customs declaration provided by the person or corporation that is exporting an item across international borders. (It is used in capturing imports and exports entries)

- · **Request Parameters:** Invoice data including sender details, receiver details, transporter details, delivery details, shipment details invoice type, invoice number, and transaction timestamp.
- · **Response:** Returns the success or failure of invoice data submission.
- · **Dependency**: A commercial invoice is required before any export of minerals, and should be followed by customs declaration, Provisional invoice (If applicable) and Final Tax Invoice or Final credit note
- · **Commercial invoice acquittal process**: A commercial invoice is acquitted upon creating associated provisional invoice or Final Tax invoice.

5.11.　　　Provisional and Final invoice Information

The Provisional invoice API facilitates the transmission of detailed provisional invoice data from a third-party system to Smart Invoice. This data includes specific details associated with each sale, such as customer information, sale type, invoice number, and the date/time of the transaction. Developers can use this API to seamlessly transfer provisional invoice information, ensuring accurate invoicing and efficient management of customer transactions.

SAVE PROVISIONAL INVOICE
- **Endpoint:** /trnsSales/saveProvisionalInvoice
- **Request method:** POST.
- **Requirement:** Required for mining sector
- **Description:** This endpoint facilitates the submission of provisional invoice data from the third-party system into Smart Invoice.
- **Request Parameters:** data including customer details, sale type, invoice number, and transaction timestamp.
- **Response:** Returns the success or failure of sales data submission.
- **Dependency:** After completing a provisional invoice transaction, it's important to update the inventory to reflect the correct levels of the items sold. This involves using the 'Save Stock Items' endpoint to show stock movements. Following this, the 'Stock Master' endpoint should be called to update the stock quantities based on the sales recorded. This process ensures that inventory adjustments due to sales are accurately reflected in the overall stock inventory, for further reporting to Smart Invoice.

- **Business rule:**
  o No Provisional Invoice must be created without related Commercial Invoices.
  o Each provisional invoice must make reference to the commercial Invoices.
  o The commercial invoice must have been already issued.
  o The commercial invoice must be picked without changes to quantities
  o The provisional invoice must be equal the quantity of Commercial Invoices issued
  o A provisional invoice can reference to multiple commercial invoice
- **Note:** All sales receipts must be printed with the 'rcptNo' which is returned in success response when sale is posted to VSDC. This is the ZRA invoice number which must be referred to when taxpayer intends to issue a credit note or debit note.

SAVE FINAL TAX INVOICE

- **Endpoint:** /trnsSales/saveFinalInvoice
- **Request method:** POST.
- **Requirement:** Required for mining sector
- **Description:** This endpoint facilitates the submission of final tax invoice which finalize a provisional from the third-party system into Smart Invoice.
- **Request Parameters:** data including customer details, sale type, invoice number, and transaction timestamp.
- **Response:** Returns the success or failure of sales data submission.
- **Dependency:**
    - After completing a provisional invoice transaction, it's important to update the inventory to reflect the correct levels of the items sold. This involves using the 'Save Stock Items' endpoint to show stock movements. Following this, the 'Stock Master' endpoint

should be called to update the stock quantities based on the sales recorded. This process ensures that inventory adjustments due to sales are accurately reflected in the overall stock inventory, for further reporting to Smart Invoice.

- **Business rule:**
  - o Final tax invoice always follows a credit not of a Provisional invoice
  - o Final invoice should reference to a provisional invoice or commercial invoice
  - o One Final invoice can finalize multiple provisional invoices
  - o One Final invoice can acquit multiple commercial invoices

SAVE FINAL CREDIT NOTE

- **Endpoint:** /trnsSales/saveFinalCombined
- **Request method:** POST.
- **Requirement:** Required for mining sector
- **Description:** This endpoint enables the submission of a final combined invoice, which finalizes a previously understated provisional invoice from the third-party system into Smart Invoice.
- **Request Parameters:** data including customer details, sale type, invoice number, and transaction timestamp.
- **Response:** Returns the success or failure of sales data submission.
- **Business rule:**
  - o Final combined invoice always follows a previously understated Provisional invoice
  - o Final combined invoice should reference to a provisional invoice

- o One Final combined invoice can finalize multiple provisional invoices
- o One Final combined invoice can acquit multiple commercial invoices
- o Final invoice allows users to submit additional adjustments on a previously understated provisional invoice

5.12. Purchase Information

The Purchases API facilitates the transmission of detailed purchase data from a third-party system to Smart Invoice. This data includes specific details associated with each purchase, such as supplier information, invoice number, item information and the date/time of the transaction. Developers can use this API to seamlessly transfer purchase information, ensuring accurate invoicing and efficient management of supplier transactions.

GET PURCHASES

- **Endpoint:** /trnsPurchase/selectTrnsPurchaseSales
- **Request method:** POST.
- **Requirement:** MANDATORY
- **Description:** Retrieve all purchases made by a business when they are supplied by another business using Smart Invoice.
- **Request Parameters:** TPIN, Branch ID, and Last Request Date
- **Response:** Returns a list of purchases with their details including item names, description, price recorded in Smart Invoice.

ERP   VSDC API

```
( Get Purchases ) ──POST /trnsPurchase/selectTrnsPurchaseSales──▶ ( Retrieves purchase data from Smart
                                                                    Invoice and stores it in ERP )
```

SAVE PURCHASES

- **Endpoints:** /trnsPurchase/savePurchase
- **Request method:** POST.
- **Requirement:** MANDATORY
- **Description:** This endpoint is utilized to approve or reject all purchases made by a business from suppliers.
- **Request Parameters:** Purchase data including supplier information, purchase type code, purchase status code, item information, etc.
- **Response:** Returns the success or failure of the purchase data submission.
- **Dependency:** Upon approval of a purchase, you must call the "Save Stock Items" endpoint to add the approved purchases as stock items. Subsequently, call the "Stock Master" endpoint to update the existing stock quantities for any items that were already present in your inventory reflecting the additional approved purchases. This process ensures that approved purchases are accurately reflected in the overall stock inventory.

ERP   VSDC API

5.13.   Stock Information

The Stock API allows businesses to manage and maintain accurate inventory levels within the Smart Invoice system. It provides endpoints to perform various stock-related operations, ensuring seamless integration and synchronization of stock data between third-party systems and Smart Invoice.

Through this API, businesses can retrieve comprehensive stock information, including item details, quantities, and associated metadata. Developers can leverage the Stock API to retrieve stock levels, update stock quantities, and manage stock movements across multiple branches or locations.

GET STOCK ITEMS
- **Endpoint:** /stock/selectStockItems
- **Request method:** POST.
- **Requirement:** OPTIONAL
- **Description:** Retrieves stock information for all items, including quantities, item details, branch-level stock, etc.
- **Request Parameters:** TPIN, Branch Id, Last Request Date.
- **Response:** Returns a list of stock items recorded on Smart Invoice.

Select Stock Items Request

SAVE STOCK ITEM

- **Endpoint:** /stock/saveStockItems
- **Request method:** POST.
- **Requirement:** MANDATORY (EXCEPT SERVICE INDUSTRY)
- **Description:** This endpoint is used to add stock items that have been recorded from approved purchases, imports, sales, and different types of stock movement adjustments, such as interbranch transfers, to Smart Invoice.
- **Request Parameters:** Stock Item data including item details such as quantities, adjustment reasons, total stock amount, etc.
- **Response:** Returns the success or failure of the save stock item operation.
- **Dependency:** subsequent call to saveStockMaster should be made after this endpoint is called.
Save Stock Items ——POST /stock/saveStockItems——> Update Smart Invoice with the stock item data

Save Stock Items Request

Object ID	Object Name	Attribute ID	Attribute Description	Attribute Name	Data Type	Required	Data Length	Format
StockIOSaveRes	Save Stock In/Out Req	tpin	Taxpayer Identification Number, identifying the taxpayer or entity associated with the stock.	TPIN	VARCHAR	Y	10

6. Code Definition

6.1. Tax Type

	Code Classification Name			
	Tax Type			
	Code	**Code Name**	**Code Description**	**remark**
VAT	A	Standard Rated 16%	Category applies to products and services which attract VAT at 16% by nature	
	B	Minimum Taxable Value (MTV)	16% is charged on the Retail Price recommended by manufacturer of MTV goods.	
	C1	Exports 0%	Applies to exports	
	C2	Zero-rating Local Purchases Order transactions 0%	Applies to transactions involving customers or projects granted exemption from paying taxes	
	C3	Zero-rated by nature 0%	Category applies to products and services which do not attract VAT at 16% by nature.	
	D	Exempt No tax charge	The category applies to specific class of products and services exempted from VAT	
	E	Disbursement	Applies to expenses incurred by suppliers on behalf of customers while supplying a product or service.	
	RVAT	Reverse VAT	Applies to transactions involving imported services. (For both Appointed Tax Agent and Self-invoicing).	
Insurance Premium Levy	IPL1	Insurance Premium Levy	Applies to the hospitality industry and computed on a total net transaction amount. Applies to all classes of insurance except re-insurance.	
	IPL2	Re-Insurance	Applies only to re-insurance.	
Tourism levy	TL	Tourism Levy	Applies to accommodation and conference facilities.	
	F	Service Charge 10%	Applies to services rendered	
Excise	ECM	Excise on Coal	The tax rate is charged per ton	
	EXEEG	Excise Electricity	The tax rate is charged per 100kwh	
Turnover Tax	TOT	No tax charge	Direct tax – tax amount does not reflect on an invoice. For purposes of accounting for turnover relating to taxpayers not registered for VAT.

Code Classification Name			
Packaging Unit			

Code	Code Name	Code Description	remark
B/L	Black Lug	Refers to a lug or container that is black in color.	
BIN	Bin	A container for storing or transporting goods	
BOTT	Bottle	A container typically used for liquids	
BOUQ	Bouquet	A collection of flowers or other items bundled together	
BOWL	Bowl	A round or oval container used for holding food or other items.	
BOX	Box	A rectangular container typically used for packaging and storage.	
BUBG	Budget Bag	A bag designed for economical or budget-conscious purposes.	
BULK	Bulk Pack	Packaging designed for large quantities of items.	
BUNC	Bunch	A grouping or collection of items, often tied together.	
BUND	Bundle	A group of items bound or packaged together.	
CLEA	Clear Lid	A lid or covering that is transparent or see-through.	
EA	Each	Indicates individual units or items.	
EACH	Each	Similar to "EA," denotes individual units or items.	
ECON	Economy Bag	A bag designed for cost-effective or budget-friendly use.	

ECPO	Econo Poc Sell	Refers to an economical or budget-friendly pocket for selling items.	
G/L	Green Lugs	Lugs or containers that are green in color.	
KARR	Karripoc	Specific packaging or container type.	
LABE	Labels	Refers to adhesive labels used for marking or identifying items.	
MESH	Mesh	Packaging material made of interconnected strands or fibers.	
NETL	Netlon	Refers to a type of net or netting used in packaging.	
P/KG	Per Kilogram	Indicates pricing or packaging based on weight in kilograms.	
PACK	PACK	General term for packaging or packaging units.	
PCRT	PCRT	Specific type of packaging or container.	
PILP	Pilpac	Specific type of packaging or container.	
POC	Pocket	A small container or compartment.	
POCS	Poc Sell	Refers to a pocket or small container used for selling items.	
POLY	Poly Bags	Bags made of polyethylene or similar materials.	
POT	Pots	Containers typically used for planting or holding plants.	
PREP	Prepack	Items or units that are prepackaged or prepared.	
PUND	Pun DTray	Refers to a tray or container for specific items.	
PUNN	Punnet - Packaging	A specific type of packaging often used for fruits or vegetables.	
SLEE	Sleeve	A covering or protective layer.	
SOCK	Sock	A fabric covering often used for protection or packaging.	
TRAY	Tray	A flat, shallow container used for holding or displaying items.	
TRSE	Tray Sell	Refers to a tray or container specifically designed for selling items.	
TUB	TUB	A container typically with a round shape and open top.	
UNWR	Unwrap	Indicates items that are not wrapped or packaged.	
WRAP	Wraped	Indicates items that are wrapped or packaged.

6.11. Registration Type

Code Classification Name			
Registration Type			
Code	**Code Name**	**Code Description**	**remark**
A	Automatic	Automatic – Purchases from another Smart Invoice user. These purchases will be identifiable from the select purchase endpoint (i.e. if the endpoint returns anything, it means these were sold to your TPIN by another Smart Invoice user.)	
M	Manual	Manual – Purchases registered directly from the CIS, that are not retrieved via the getPurchase endpoint.	

6.12. Purchase Receipt Type

Code Classification Name			
Purchase Receipt Type			
Code	**Code Name**	**Code Description**	**remark**
P	Purchase	Purchase	
R	Refund after Purchase	Refund after Purchase	

6.13. API Response Code

Code	**System**	**Description**
000	Server	It is succeeded
001	Server	There is no search result
801	Client	There is no data to retransmit.
802	Client	There is data that has not been transferred. After transfer is possible.
803	Client	This is a report that transfer is complete.
804	Client	There is no data to send for the report.
805	Client	Corresponding retransmission data exists.
834	Client	SalesType and ReceiptType must be NS-NR-ND-TS-TR-TD-CS-CR-CD-PS check your inputs
836	Client	Your Sequences have been altered, Connect to ZRA API to get Sequences.
838	Client	Connection to API is not established: check connection.
884	Client	Invalid customer TPIN was provided
891	Client	An error occurred while Request URL is created.

892	Client	An error occurred while Request Header data is created.	
893	Client	An error occurred while Request Body data is created.	
894	Client	An error regarding server communication occurred.	
895	Client	An error regarding unallowed Request Method occurred.	
896	Client	An error regarding Request Status occurred.	
899	Client	An error regarding Client occurred.	
900	Server	There is no Header information	
901	Server	It is not valid device	
902	Server	This device is installed	
903	Server	Only VSDC device can be verified.	
910	Server	Request parameter error	
911	Server	There is no request full text	
912	Server	There is a request Method error.	
913	Client	Code value error among request parameters.	
921	Server	Sales or sales invoice data which is declared cannot be received.	
922	Server	Sales invoice data can be received after receiving the sales data.	
924	Client	CIS Invoice number already exists.	
930	Server	The specified invoice could not be found. Please verify [orgInvcNo] and try again	
931	Server	The credit note amount exceeds the original invoice amount for item:	
932	Server	The item specified in the credit note does not exist on the original invoice. [itemCd]	
934	Server	The quantity specified in the credit note exceeds the quantity in the original invoice.	
935	Server	The credit note contains information that does not match the original invoice data	
990	Server	The maximum number of views are exceeded	
991	Server	There is an error during registration	
992	Server	There is an error during modification	
993	Server	There is an error during deletion	
994	Server	There is an overlapped Data	
995	Server	There is no downloaded file	
999	Server	There is an unknown error. Please ask it administrator	

6.14. Stock In/Out Type

Code Classification Name			
Stock In/Out Type			
Code	**Code Name**	**Code Description**	**remark**
01	Import	Incoming-Import	
02	Purchase	Incoming- Purchase	
03	Return	Incoming- Return

Code	Code Name	Code Description	remark
13	Stock Movement	Outgoing- Stock Movement	
14	Processing	Outgoing- Processing	
15	Discarding	Outgoing- Discarding	
16	Adjustment	Outgoing- Adjustment	

6.15. Credit Note Reason Code

32			Refund reason code	
Code	Sort Order	Code Name	Code Description	remark
01	1	Wrong product(s)	Wrong product(s)	
02	2	Wrong price	Wrong price	
03	3	Damaged Goods	Damaged Goods	
04	4	Wrong Customer Invoiced	Wrong Customer Invoiced	
05	5	Duplicated invoice	Duplicated invoice	
06	6	Excess supplies	Excess supplies	
07	7	Other (Provide other reason in brief)	Other (Provide other reason in brief)	

6.16. Item code Generation

The item code field is required and must have a unique value. This means that each item registered in the CIS should be identified by its own unique item code.

Where the **CIS has no unique identifiers** for a registered item, the below formula should be used to generate item code.

For example: **itemCd:** ZM2NTBA0000012

ZM: Country of Origin (Zambia)
2: Product Type (Finished Product)
NT: Packaging Unit (NET)
BA: Quantity Unity (Barrel)
0000012: increments from 0000001 to N value

6.17. Import Item status.

Code Classification Name			
Import item Status			
Code	Code Name	Code Description	remark
3	Approved		These are imported items approved to be stocked-in
4	Rejected		These are non-stock imports

6.18. Debit note reason.

Code Classification Name			
Reason for debit note			
Code	Code Name	Code Description	remark
01	Wrong quantity invoiced		

02	Wrong invoice amount		
03	Omitted item		
04	Other [specify]
